

Genuine GAMMA Himalayan Salt Lamps

What Are Himalayan Salt Crystal Lamps?

Salt crystal lamps are made from salt crystal rocks formed by nature hundreds of millions of years ago and mined over 500 yards underground from the foothills of Himalayas.

The Salt Lamps we use come from caves of salt crystals, where explosives are strictly prohibited to preserve the structures of the crystals.

Our lamps are carefully crafted by hand to retain the unique, beautiful and natural shape of the rock. The result is a rare crystal with such beautiful colors ranging from off-white to apricot and warm pink.

Nature's Natural Ionizer

Many of us live and work in surroundings dominated by technology; computers, televisions, printers, microwave ovens, air conditioners and heaters, just to name a few.

It is universally accepted that these electronic devices emit positive ions into the air we breathe, which can result in mental and physical exhaustion and effect overall wellness.

Salt crystal lamps are natural ion generators, emitting negative ions into the atmosphere. *Why is this a good thing?* Negative ions restore and neutralize air quality.

Lamp Size and Room Size

Mini Salt Lamp - 4-5 lbs, 5"-6" tall are most suitable for night-light or for kids rooms.
